~ About MMA ~

The Marine Machinery Association (MMA) was established in 1984 by the leading suppliers of machinery, equipment and services to the shipbuilding industry. Since its inception, MMA has been consistently at the forefront of the effort to support the interests of these suppliers to the Navy and the shipyards.

MMA conducts two public industry meetings each year. The Spring meeting is usually held in Washington, D.C. This one-day conference concentrates on current U.S. Government programs. The second symposium is held during the Fall and is typically co-sponsored by a U.S. Navy shipbuilder and held at a location near the shipyard. This meeting comprises two days of intense presentations and social events to assist with networking and face-to-face discussions between customer and supplier.

In addition to the large conferences, smaller meetings are held monthly at strategically selected locations. These gatherings are meant to bring the marine industry's suppliers together with some of their best customers for private exchanges of ideas and opinions. The locations of the smaller meetings typically rotate among the shipyards, Government facilities, and the locations of MMA members.

MMA has the personnel and the resources to communicate directly with both U.S. Government and shipyard personnel. It is a strong voice for the marine industry that is both listened to and respected. It can also provide a unique set of opportunities for members to have direct interaction with high-level procurement officials.

Join the Marine Machinery Association today to stay current on ever-changing U.S. Government programs and policies and make your voice heard.

~ From the Chairman ~

The Marine Machinery Association is the trade association that represents the machinery and equipment manufacturers and all the companies that supply products and services for both naval and merchant ships.

MMA speaks directly to the U.S. Navy, U.S. Coast Guard, Department of Defense agencies and the shipyards on behalf of its members. It also provides a forum for direct customer-supplier interaction to discuss the on-going issues related to product improvement, cost reduction and increased efficiencies. MMA works to bring the U.S. Government, the shipyards and the supplier base together as partners, not adversaries, to address business issues and bring about timely solutions.

As the U.S. Navy fleet transforms itself with a concentration on command and control and weapons systems improvements, and the U.S. Coast Guard rebuilds an aging fleet, the Marine Machinery Association is working to ensure that the opportunities for better products that reduce cost, improve performance and reduce maintenance are introduced to the fleet. All of the companies associated with MMA are dedicated to working together and bringing about major improvements to existing products. Only by making worthwhile reductions in overall life cycle costs can these new products be incorporated into the new classes of ships and submarines.

The association is constantly looking for ways to assist its members. A primary goal of the Association is to return the U.S. marine industry supplier base to the forefront of the commercial shipbuilding industry. By building on the lessons learned during the strict development and advancement of products and services for the U.S. Navy, the U.S. supplier base can increase U.S. market-share across the globe.

The primary focus of MMA will continue to be the promotion of business ethics and the supply of quality products and services to our valued customers.
